

# The New HaloStick Plus 7 Ultimate – Pixel

To being using Pixel, please visit this instructions or sent message of website customer services.

<https://www.facebook.com/xbcke1234>

## Necessity:

Micro SD card or TF SD card

Portable recharger

MicroUSB transmission line

## Step 1:

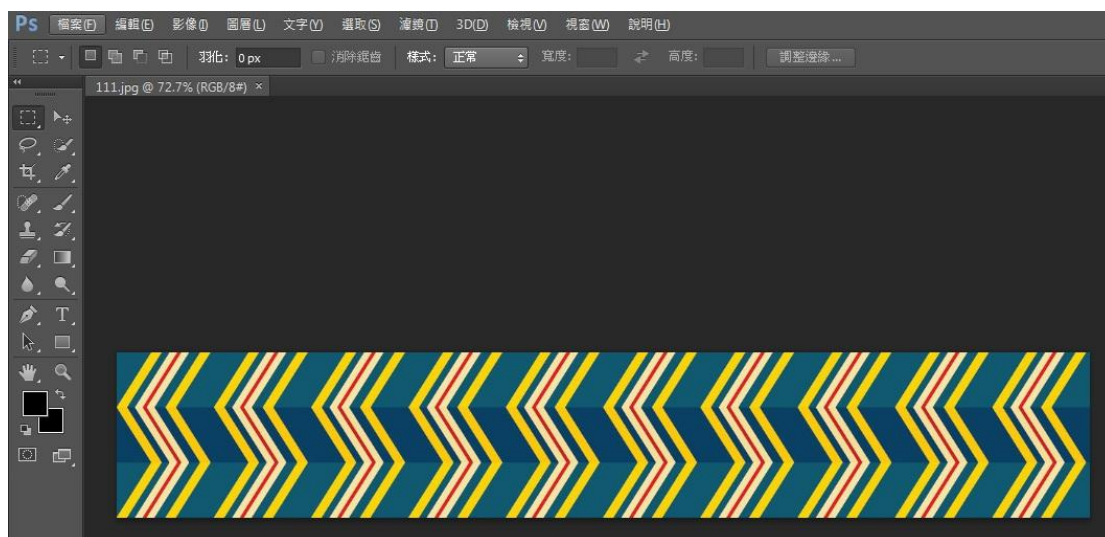

Micro SD card need to Format by **FAT32**/FAT16

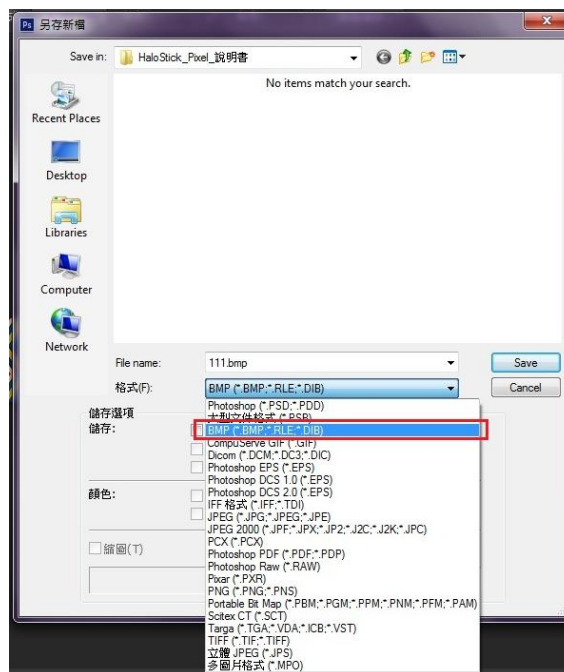

## Step 2:

The image needed to be **24-bit BMP** file, the introduction of Adobe Photoshop in follow step.

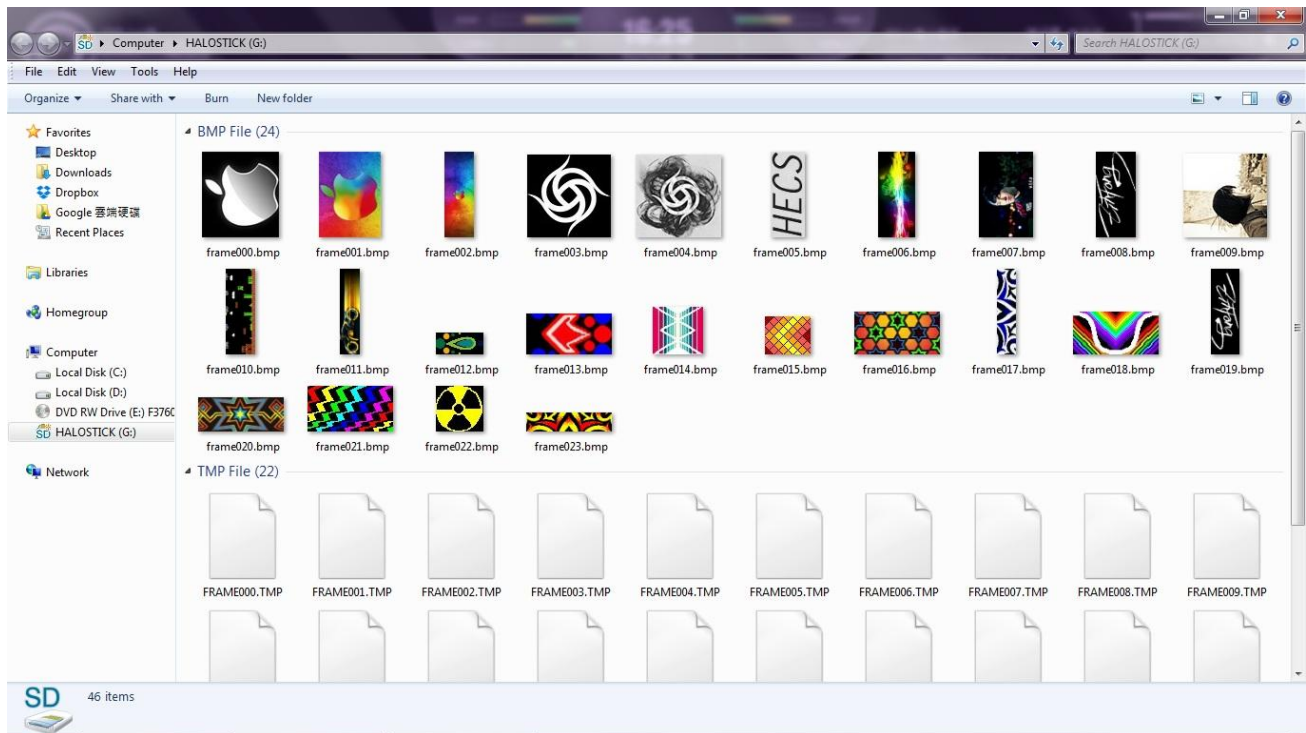

And this Pixel's resolution is **88 pixel** (high), the weight is unlimit.

### Step 3:

According to “frame000.bmp” “frame001.bmp” ..... of image name store in SD card.

### Step 4:

Insert the SD card into the Pixel, and connect portable recharger.

Function:

Red button: Turn on/off power

Black rotation: Image display speed  
(high-right/slow-left)

Blue button: Star trigger

Red LED: warning it is busy!

(middle of blue button and black rotation)

When you **modify image of SD card**, first time open power need to **wait it loading** (Red LED on), then, the **next time open power** can **press blue button** and **hold it until the Red LED off**, that can omission the loading step to being quickly.

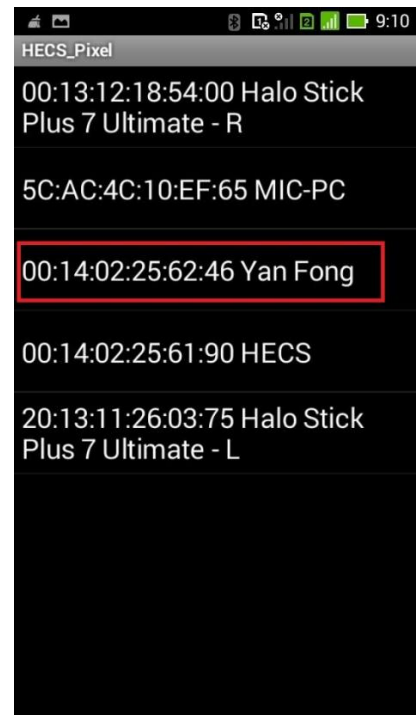

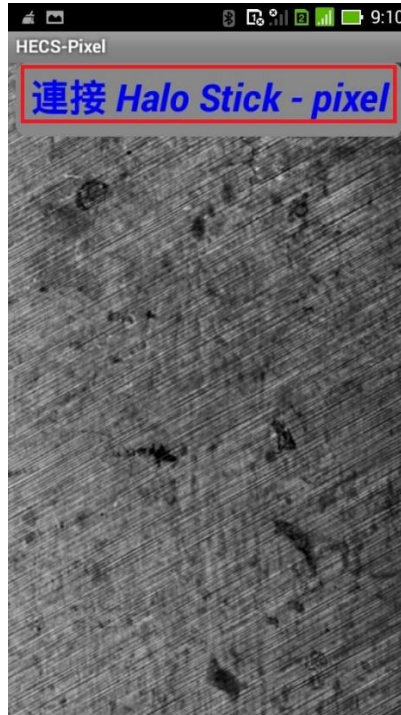

APP:

Using **wireless transmission control** Pixel is the main feature of this APP, **full-color lighting**, **colorful special effect**, **image display control**, hope this control systems can be more convenient to use and creation.

The **first time you use your smartphone** must be **paired Pixel devices**. APP can be used directly after pairing.

Have Fun!
